

**Eurotoll,
opening the road to interoperable
tolling**

Jean-Michel MARTINEZ

**European Directive / interoperability / and the real
life**

The **EETS Regulatory Authority's** role needs to be clarified
a national "authority" like France and Spain today

Certification of EETS Providers
Test financial capability, contracts with Toll Chargers and technical capabi.

Deployment Schedule is highly optimistic
A risk of uncontrolled expansion of non EETS services across Europe, but

EETS Provider geographical coverage:
For an EETS provider, covering all Europe in a "big bang" is impossible ,
Regional schemes initiatives are already working

Open Platform for the European OBU:
OBU must be open to allow the EETS Provider to develop additional secas
But standards are needed to insure interoperability
