# THE SAFE ROAD TOWARDS VISION ZERO: PERSPECTIVES AND CHALLENGES

- Tolled Motorways are different and the safest roads in Europe!
- Road Safety is an integrative element of road operation / management and of high social-economic responsibility!
- Think and work in a „Safe System Philosophy“! But what does it mean?
  - Well balanced and „best possible solutions“ regarding financial, environmental and social aspects
  - Global and regional responsibility within a clear framework
  - All levels and stakeholders need to work together (every contribution counts)

# Critical elements to reach the safe way

- Bridges to be built
  - Accurate accident data is the core of work and decisions on all levels
  - Accurate infrastructure and asset data is equally important
  - Find economic balance between environmental and economic needs
  - New technologies and driving assistance systems – quality and human behaviour is the key factor
  - Incident-Management and maintenance is in the short-term focus of realistic safety improvements on motorways
  - Efficient Enforcement is a must for a „Safe System“

# Experts' Presentations

Moderator : **Alessandro Musmeci, AISCAT**

Keynote speaker : **Federica Deledda, Member of the ROADPOL Executive Committee**
