## ASECAP Statement:

### Delegated Act on specifications for C-ITS

ASECAP represents European Road Operators and maintains 50,000km of toll-roads. Road Operators are responsible for road maintenance, road safety and traffic flow on significant parts of Europe's motorways. ASECAP members deploy cooperative ITS (C-ITS) to improve road safety and traffic efficiency.

ASECAP members want to make sure that C-ITS and electronic road charging systems can co-exist without harmful radio interference. ASECAP will observe updates so that the Delegated Act, even in future, assures that coexistence.

ASECAP members are technology neutral regarding C-ITS as far as investments are safeguarded, as well as the coherence with markets developments. They therefore welcome the review mechanism in the Delegated Act. It assures a fast track mechanism into the C-ITS framework for new and mature technologies that must follow the same standardization process and guarantee backwards compatibility. The Delegated Act gives a clear guidance on interoperability so that the evolution of C-ITS is possible. Innovation of new C-ITS services for automated driving requires a stable C-ITS communication environment which the Delegated Act provides.
